Lekan Lawal

Data, BI and AI

Toronto, ON lekan1553@gmail.com (289) 671-5308 linkedin.com/in/lekan-lawal lekanlawal1.github.io/portfolio-site

Computer Science graduate (Trent University, 2026) who builds data and AI tools that check their own work: dashboards on live data, AI whose answers are verified in code, and Excel tools for operations teams. Every project below is live on my portfolio.

SKILLS

Languages: Python, SQL, JavaScript, Swift, HTML/CSS
Data and ML: pandas, DuckDB, scikit-learn, statsmodels, gradient boosting, logistic regression, forecasting, data testing
BI and visualization: Excel (INDEX/MATCH, SUMIFS), Power BI, Tableau, Plotly.js
AI: Gemini API, on-device AI, Vision OCR, structured JSON output, AI output validation, prompt-injection defences
Apps, cloud and tools: SwiftUI, React, Streamlit, Firebase, REST APIs, Cloudflare Workers, GitHub Actions, Git, Jira, HubSpot

PROJECTS

Football Stats Agent — Python · DuckDB-WASM · SQL · scikit-learn · Gemini API · Cloudflare Workers · live

- Built an agent that turns plain-English football questions into SQL that runs in the user's browser on 1,853 matches of event data, always showing the query so every answer can be checked.
- Answered 22 of 22 hand-checked questions correctly, handled 14 of 14 vague ones, and stopped 12 of 12 attempts to break it. Includes my own expected-goals model.

Canada Economy Intelligence Platform — Python · DuckDB · statsmodels · GitHub Actions · Gemini API · Plotly.js · live

- Built a self-refreshing pipeline on live Statistics Canada data that runs 89 checks before every update, with 11 of 11 headline figures matching official releases.
- Forecasts tested against a baseline (Diebold-Mariano), anomaly flags (median/MAD), AI briefings checked in code (15 of 15 planted errors caught), and a personal inflation calculator within 0.08 points of the official rate.

Money Snitch: Margin and Card Fee Checker — SQL · DuckDB-WASM · JavaScript · pdf.js · Python tests · live

- Built a browser tool that turns any sales export into a margin dashboard with the SQL behind every chart, plus a card fee checker that reconciles processor statements to the cent against Visa's, Mastercard's and Amex's published rates.

Docket: Private PDF Toolkit — JavaScript · pdf-lib · pdf.js · WebAssembly · Tesseract OCR · PWA · live

- Built 38 PDF and image tools (sign, redact, fill flat forms, PDF to Word and Excel, OCR) that run entirely in the browser, so no file is ever uploaded. Works offline, with 131 automated checks.

Fine Print: iOS Contract Checker — Swift 6 · SwiftUI · Vision OCR · On-device AI · Gemini API · Swift Testing · live

- Built an iPhone app that checks leases, job offers and terms of service against Ontario law, with AI output verified in code: zero wrong legal verdicts across 12 test documents, and response time cut from 175 s to 2 s.

App Review Insights — JavaScript · Gemini API · Cloudflare Workers · data visualization · live

- Built a tool that analyses any iPhone app's App Store reviews: rating trends, update impact, and AI-grouped themes with every quote verified against its source review (28 of 28 on 500 reviews).

Shipment and Inventory Discrepancy Checker — Excel · INDEX/MATCH · SUMIFS · JavaScript · live

- Built an Excel workbook for warehouse and 3PL teams that checks cycle counts, receipts and storage invoices against the system, purchase order and rate card, totalling every exception on one dashboard.

WORK EXPERIENCE

Business Development Representative · Anchorbase, Toronto — Jun 2026 – Sep 2026

- Logged and cross-checked call outcomes in the CRM daily under quota pressure, catching data entry mistakes before they became bad data downstream.
- Worked through a full daily queue of calls and follow-ups, and reported activity metrics to my manager in a format built for quick decisions.

Front of House Staff · Eggstatic, Ajax — Jan 2024 – Jul 2026

- Kept spreadsheet-based reservation and transaction tracking accurate during busy shifts.

Sales Associate · Virtue Vintage, Oshawa — Mar 2024 – Apr 2025

- Traced a pricing error to two systems falling out of sync and corrected it at the source before it spread.
- Reconciled inventory and online listings across two systems every week, catching discrepancies before customers did.

EDUCATION

BSc (Honours) Computer Science, self-directed focus in Data Analytics · Trent University Durham — June 2026
